

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A digital/analog broadcasting receiver comprising:
  - a receiver for receiving an encoded digital/analog broadcasting signal originated from a broadcasting station;
  - a digital/analog decoder for decoding the digital/analog broadcasting signal received from the receiver and then outputting the signal to a display which displays an image;
  - a memory for storing channel information contained in the broadcasting signal decoded by the digital decoder;
  - a control unit for controlling each of the other sections of the receiver; and
  - an input device for a user to input an operation instruction to the control unit,wherein the control unit has a function to set and select an operation mode of the receiver for each user based on inputs by a plurality of users who use the input device,
- wherein the input device has a numeral inputting key for inputting a numeral when the operation mode is selected;

wherein the control unit assigns a predetermined selection number input by the user to the set operation mode and stores the selection number and the operation mode in correlation with each other in the memory,

wherein the control unit compares a number of the numeral inputting key entered by the user with a channel number stored the memory to determine whether the number of the numeral inputting key coincides with the channel number stored in memory, and

wherein when the ~~user has operated the numeral inputting key to enter the selection number and~~ number of the numeral inputting key does not coincide with a channel number stored in the memory, the control unit refers to the memory to select the operation mode that corresponds to the selection number thus entered.

2. (Currently Amended) A digital/analog broadcasting receiver comprising:

a receiver for receiving an encoded digital/analog broadcasting signal originated from a broadcasting station;

a digital/analog decoder for decoding the digital/analog broadcasting signal received from the receiver and then outputting the signal to a display which displays an image;

a memory for storing channel information contained in the broadcasting signal decoded by the digital decoder; a control unit for controlling each of the other sections of the receiver; and

an input device for a user to input an operation instruction to the control unit, wherein the control unit has a function to set and select an operation mode of the receiver for each user based on inputs by a plurality of users who use the input device, ~~characterized in that,~~

wherein the input device has an operation key which is assigned a specific operation instruction and direction keys comprised of UP/DOWN keys and RIGHT/LEFT keys each of which is assigned the operation mode for each user; and

wherein the control unit assigns any one of the direction keys input by the user to the set operation mode and stores the direction key and the operation mode in correlation with each other in the memory and also, when the user presses both the operation key and any one of the direction keys, refers to the memory to select the operation mode that corresponds to the direction key thus pressed by the user.

3. (Currently Amended) A digital/analog broadcasting receiver comprising:

a receiver for receiving an encoded digital/analog broadcasting signal originated from a broadcasting station;

a digital/analog decoder for decoding the digital/analog broadcasting signal received from the receiver and then outputting the signal to a display which displays an image;

a memory for storing channel information contained in the broadcasting signal decoded by the digital decoder;

a control unit for controlling each of the other sections of the receiver; and  
an input device for a user to input an operation instruction to the control unit,

wherein the control unit has a function to set and select an operation mode of the receiver for each user based on inputs by a plurality of users who use the input device, ~~characterized in that,~~

wherein the input device has a numeral inputting key for inputting a numeral when the operation mode is selected, [[:]] and

wherein the control unit assigns a predetermined selection number input by the user to the set operation mode and stores the selection number and the operation mode in correlation with each other in the memory and also, when the user operates the numeral inputting key to hold the numeral key corresponding to the selection number pressed for at least a predetermined time, refers to the memory to select the operation mode that corresponds to the selection number thus entered.

4. (Original) The digital/analog broadcasting receiver according to claim 1, further comprising an on-screen display (OSD) for displaying the channel information on the display connected to the receiver, wherein the operation mode is adapted to set a font type, size, and display color of the channel information displayed on the OSD display and a background display color individually for each user.

5. (Currently Amended) A broadcasting receiver comprising:

a memory for storing an operation mode of the receiver;

a control unit for controlling each of the other sections of the receiver; and

an input device for a user to input an operation instruction to the control unit,

wherein the control unit has a function to set and select the operation mode of the receiver for each user based on inputs by a plurality of users who use the input device, ~~characterized in that,~~

wherein the input device has a numeral inputting key for inputting a numeral when the operation mode is selected; and

wherein the control unit assigns a predetermined input pattern, that includes at least two digits, by use of the numeral inputting key to the operation mode and stores the operation mode in correlation with the input pattern in the memory and, when the user operates the numeral inputting key in the input

pattern, refers to the memory to select the operation mode that corresponds to the input pattern.

6. (Currently Amended) A broadcasting receiver comprising:

a memory for storing an operation mode of the receiver;

a control unit for controlling each of the other sections of the receiver; and

an input device for a user to input an operation instruction to the control unit,

wherein the control unit has a function to set and select the operation mode of the receiver for each user based on inputs by a plurality of users who use the input device, ~~characterized in that,~~

wherein the input device has a predetermined operation key which is assigned a specific operation instruction and direction keys comprised of UP/DOWN keys and RIGHT/LEFT keys each of which is assigned the operation mode for each user; and

wherein the control unit assigns any one of the direction keys to the operation mode and stores the operation mode in correlation with the direction key in the memory and, when the user presses the operation key and also any one of the direction keys, refers to the memory to select the operation mode that corresponds to the direction key thus pressed.

7. (Currently Amended) The digital/analog broadcasting receiver according to claim 1, wherein when the number of the numeral inputting key coincides with a channel number stored in the memory, the control unit causes a tuner to receive a channel corresponding to the channel number is selected.

8. (Currently Amended) The digital/analog broadcasting receiver according to claim 1, wherein when the control unit selects the operation mode when a broadcasting image is output to the display, the user has operated the numeral inputting key to enter the selection number and the number of the numeral inputting key does not coincide with a channel number stored in the memory.

9. (Previously Presented) The digital/analog broadcasting receiver according to claim 2, further comprising an on-screen display (OSD) for displaying the channel information on the display connected to the receiver, wherein the operation mode is adapted to set a font type, size, and display color of the channel information displayed on the OSD display and a background display color individually for each user.

10. (Previously Presented) The digital/analog broadcasting receiver according to claim 3, further comprising an on-screen display (OSD) for displaying the

channel information on the display connected to the receiver, wherein the operation mode is adapted to set a font type, size, and display color of the channel information displayed on the OSD display and a background display color individually for each user.

11. (Previously Presented) The digital/analog broadcasting receiver according to claim 3, wherein the numeral key is pressed for less than the predetermined amount of time, the control unit causes a tuner to receive a channel corresponding to the pressed numeral key.

12. (Previously Presented) The broadcasting receiver according to claim 5, further comprising an on-screen display (OSD) for displaying the channel information on the display connected to the receiver, wherein the operation mode is adapted to set a font type, size, and display color of the channel information displayed on the OSD display and a background display color individually for each user.

13. (Previously Presented) The broadcasting receiver according to claim 5, wherein the predetermined input pattern does not coincide with a channel number stored in the memory.
